brady@bangasser.dev | (651) 769-5301 | bangasser.dev | github.com/BradyBangasser | linkedin.com/in/bbangasser | Saint Paul, MN

Cloud engineer with security focus. Builds reproducible multi-cloud and on-prem infrastructure, enforces least-privilege access, and hardens environments to NIST and platform baselines.

EXPERIENCE

Iowa State University

Apr 2025 – Present

System Administrator

- Operate and maintain a production HPC cluster with SLURM, Kubernetes, Active Directory, Ansible, Prometheus, and Apptainer, keeping it secure and available for a large user base.

John Deere

May 2025 – Aug 2025

Cloud Security Engineer

- Built and deployed tooling that verified 100,000+ AWS and Azure resources against company policy, NIST standards, and platform best practices.
- Designed and managed least-privilege IAM policies in AWS to tighten cloud access control.
- Wrote automated remediation for common misconfigurations flagged across the cloud estate.
- Led a migration of IAM, security, and dev-management tooling from Python to Go, cutting runtime cost by over 10%.

PROJECTS

Erid – Unified Cloud Images

2026

- Single Packer + Terraform pipeline that builds identical, reproducible golden images across multi-cloud and on-prem targets, applying the same hardening everywhere to eliminate drift.
- Standardized a hardening baseline applied identically to every target image, so security posture no longer varies by platform.
- Replaced per-cloud manual image setup with one definition, cutting drift and setup time across environments.

Computer Vision Parking Enforcement Radar

2025–2026

- Stored and queried detected-vehicle geolocation in PostgreSQL for fast spatial lookups.
- Architected a Redis Streams pipeline for low-latency, high-throughput image and detection routing from a REST API to processing servers, backed by PostgreSQL geospatial storage.

Public Data Scraping and Processing

2025

- Built a parallel, scalable pipeline to scrape, clean, and store public datasets, deployed via a Terraform CI/CD pipeline to AWS and a personal Kubernetes cluster.

Secure Backend Architecture & Authentication

2025–2026

- Built a secure backend with user authentication and JWT sessions over a fully encrypted MySQL database, exposing scalable, high-throughput API routes.
- Exposed scalable, high-throughput API routes with authentication enforced on every endpoint.
- Modeled and secured relational data in an encrypted MySQL schema with integrity constraints.

EDUCATION

Iowa State University

Ames, IA

M.S. Computer Science · GPA: 4.00

Aug 2025 – May 2027

- Concurrent B.S./M.S. program
- Coursework: Advanced Topics in High Performance Computing, Distributed Systems and Middleware, Data Security in Machine Learning, Network Design and Security

Iowa State University

Ames, IA

B.S. Computer Science · GPA: 3.79 · Dean's List

Aug 2024 – Dec 2026

- Coursework: Compiler Design and Development, AI and Machine Learning in High Performance Computing, Network Architecture and Security, Theory of Computing, Software Design Practices

TECHNICAL SKILLS

Languages: C, C++, Python, Go, Rust, Bash, SQL

Infrastructure & Platform: Kubernetes, Docker, Terraform, Packer, Ansible, Linux/Unix, Git, CI/CD

Cloud: AWS, Azure, Google Cloud, AWS EKS, IAM

Data & Backends: MySQL
