Cloud engineer with security focus. Builds reproducible multi-cloud and on-prem infrastructure, enforces least-privilege access, and hardens environments to NIST and platform baselines.

EXPERIENCE

System Administrator, Iowa State University

Apr 2025 – Present

Ames, IA

- Operate and maintain a production HPC cluster with SLURM, Kubernetes, Active Directory, Ansible, Prometheus, and Apptainer, keeping it secure and available for a large user base.
- Built diagnostic and monitoring workflows that isolate hardware degradation, network bottlenecks, and software-stack faults before they take nodes offline.

Cloud Security Engineer, John Deere

May 2025 – Aug 2025

Johnston, IA

- Built and deployed tooling that verified 100,000+ AWS and Azure resources against company policy, NIST standards, and platform best practices.
- Designed and managed least-privilege IAM policies in AWS to tighten cloud access control.
- Wrote automated remediation for common misconfigurations flagged across the cloud estate.
- Led a migration of IAM, security, and dev-management tooling from Python to Go, a ~10x performance gain that cut AWS Lambda runtime costs by roughly the same factor.
- Deployed high-throughput Go services on AWS EKS to run compliance checks across the cloud estate.

PROJECTS

Erid – Unified Cloud Images

2026

- One Packer + Terraform pipeline that builds identical, reproducible qcow2 golden images across every major cloud (AWS, GCP, Azure, Oracle, Hetzner) and on-prem, applying the same hardening everywhere to eliminate drift.
- Standardized a hardening baseline applied identically to every target image, so security posture no longer varies by platform.
- Produces multiple image variants for different node roles, plus matching container images, all from the same definition.

Tech: Terraform, Packer, AWS, GCP, Azure, Oracle, Hetzner, qcow2, Linux

Computer Vision Parking Enforcement Radar

2025–2026

- Stored and queried detected-vehicle geolocation in PostgreSQL for fast spatial lookups.
- Architected a Redis Streams pipeline for low-latency, high-throughput image and detection routing from a REST API to processing servers, backed by PostgreSQL geospatial storage.

Tech: Python, Redis Streams, PostgreSQL, REST

Public Data Scraping and Processing

2025

- Built a parallel, scalable pipeline to scrape, clean, and store public datasets, deployed via a Terraform CI/CD pipeline to AWS and a personal Kubernetes cluster.
- Wrote a compiler-like tool that pairs lexical analysis with an LLM to standardize and validate data formats, and trained an ML model to flag anomalies in the collected data.

Tech: C++, C, Python, Lua, Rust, MySQL, Docker, PyTorch, Terraform, Kubernetes

Secure Backend Architecture & Authentication

2025–2026

- Built a secure backend with user authentication and JWT sessions over a fully encrypted MySQL database, exposing scalable, high-throughput API routes.
- Exposed scalable, high-throughput API routes with authentication enforced on every endpoint.
- Modeled and secured relational data in an encrypted MySQL schema with integrity constraints.

Tech: Go, MySQL, JWT

EDUCATION

M.S. Computer Science, Iowa State University

Aug 2025 – May 2027

GPA: 4.00

- Concurrent B.S./M.S. program
- Coursework: Advanced Topics in High Performance Computing, Distributed Systems and Middleware, Data Security in Machine Learning, Network Design and Security

B.S. Computer Science, Iowa State University

Aug 2024 – Dec 2026

GPA: 3.79 · Dean's List · Minors in Cybersecurity and Data Science

- Coursework: Compiler Design and Development, AI and Machine Learning in High Performance Computing, Network Architecture and Security, Theory of Computing, Software Design Practices

TECHNICAL SKILLS

Languages: C, C++, Python, Go, Rust, Bash, SQL

Infrastructure & Platform: Kubernetes, Docker, Terraform, Packer, Ansible, Linux/Unix, Git, CI/CD

Cloud: AWS, Azure, Google Cloud, AWS EKS, IAM

Data & Backends: MySQL

Security: NIST standards, Least-privilege IAM, AES / RSA / ECDH, JWT / auth
